TCI Software, Inc.

A better way to identify students experiencing a mental health crisis

Colleges and Universities are facing increasing student-wellness challenges. Many students in distress do not self-identify, and traditional reporting channels often miss early indicators. TCI Software provides an early-warning student wellness survey system that helps universities identify students who may be in or near crisis. The platform deploys short, PHQ-9 based surveys and automatically flags students who may require support, enabling counseling centers to intervene earlier and prioritize caseloads.

"Student mental health is not just a personal issue; it's a campus-wide challenge that affects academic success and community well-being"-- Dr. Nicole Clark, USC Center for Health.

TCI Software has been providing software solutions for over 12 years. It's Rounds patient engagement software platform has been used by over 200 hospitals and clinics in 31 states.

How it works

- Deploys short, evidence-based surveys 24/7 (Create your own)
- Surveys automatically score and flag at-risk students
- Sends email alerts to counseling staff
- Language translations are built-in
- Provides actionable insights
- Maintains privacy-aligned data handling
- Can integrate with existing campus email systems
